

**9 PHOTOQUIZ**

**Figure 9.** This 53-year-old HIV positive man stopped taking his anti-retroviral therapy, and 6 months later presented to his doctor with a CD4 count of 3 cells/mm<sup>3</sup>. Over a 3 week period he had developed intensely itchy, encrusted lesions of his feet and hands, and other isolated areas of his body.

Name the condition, and the organism commonly associated with this condition. Send an email to [kerriganm@nicd.ac.za](mailto:kerriganm@nicd.ac.za) with 'March photoquiz' and the answer in your subject line. Correct and incorrect responses will receive a free subscription to the NICD Communiqué.
